

Action operads comments to fix

1. INTRODUCTION

-

2. ACTION OPERADS

-

3. OPERADS IN THE CATEGORY OF CATEGORIES

-

4. MONOIDAL STRUCTURES AND MULTICATEGORIES

-

5. INVERTIBLE OBJECTS

- Decide on ELambda algebras or Lambda monoidal categories throughout
- Need 2-adjunction
- Change to equalizers
- Include notation for η as the unit here, use different notation for units elsewhere
- Change to $(LX)_{inv} = LX$
- Fix $()$ s
- Include triangle
- Explain purpose of corollary
- Move comment
- Uniform gp superscripts
- Remove actually
- Ref η
- Replace with is, remove parts
- Remove proof
- Fix paragraph; make clear we are determining composition
- Explain M strategy, include forward refs
- Fix ab superscripts, same as gp
- qi
- Under red line: move? make remark? delete some?
- New notation
- Where do we say this?
- Fix weakly invertible section

6. INVERTIBILITY AND GROUP ACTIONS

- Forward ref
- definition env
- missing ref
- little wording fixes
- change G to Lambda

- S vs Sigma for symmetric groups
- Think about free monoid lem again
- Fix triangle
- lots of notation issues (e, G, length bars)
- why splitting
- missing ref?
- splits by construction: hmm
- ref?
- for v, v' not delta of something
- why? comment
- minor wording
- inverses for morphisms under comp vs tensor
- missing ref?
- more G's (x2)
- another missing ref
- another G
- include corollary?
- forward refs
- not happy with last section
- practical?

7. COMPUTING AUTOMORPHISMS OF THE UNIT

- in the next two results
- 4.1.2 two boxes
- the above following square
- insert =
- 4.1.3 check 2.3.10
- check $4n$ or $2n$
- mentioned Delta, I
- remove functor
- explain purpose
- improve proof 4.2.3
- fixed proof 4.3.2
- check commutative Square
- isomorphism symbol
- redo 4.4
- insert diagram
- bad line break at the beginning of 4.5
- consistent text after 4.5.3
- move something to earlier
- make sure length and size notation is introduced earlier
- clarify this
- highlight that star means the inverse under tensor product for morphisms
- change prove to shows
- bad line break
- insert the proof from Ed's email
- put a short proof
- check the note

- change express to describe
- isomorphism symbol
- change make sure to ensures
- remove calculation
- change we want to do

8. A FULL DESCRIPTION OF L_n

- bad line break
- remove exposition
- fix fancy G
- change G to lambda
- isomorphism symbol
- tensor product given component wise
- check reference
- rewrite calculation
- check universal property
- insert for a simple example

9. EXAMPLES

- Actually read this section, fix anything
